Quality management

Quality management plays a crucial role in Ratimir's policy. We devote the utmost attention to every component, every process step, and every transportation and storage condition.

- We work with reliable and proven suppliers;
- We adhere to strict quality standards for meat raw materials;
- We use safe auxiliary ingredients, spices, casings, and packaging;
- We do not use genetically modified ingredients;
- We inspect all raw materials and auxiliary components in our own unique production laboratory.
- We inspect all finished products right up to the store shelf.

We were among the first meat processing plants in the Far East to receive certification for a food safety management system that meets the requirements of the ISO 22000 standard.

The practical implementation of HACCP principles and the management system allows the company to ensure the production of safe products for consumers in the Far East and to enter foreign markets.

Quality control stages:

1 RECEIPT OF RAW MATERIALS FOR PRODUCTION

Checking the quality of raw materials for compliance with legal requirements (technical regulations, state standards).

2 PRODUCTION OF PRODUCTS

In order to ensure the quality and safety of food products manufactured by the enterprise, control points have been established at all stages of the production process.

3 QUALITY CONTROL OF FINISHED AND SEMI-FINISHED PRODUCTS

It is carried out in the Ratimir production laboratory.

Awards

Since 2020, our company has been a regular participant and winner of major national and regional exhibitions. The quality of Ratimir's products has repeatedly received high praise at the international and national levels. We were two-time diploma winners and two-time laureates of the federal stage of the All-Russian competition "100 Best Products of Russia 2024." At the PRODEXPO-2025 international exhibition in Moscow, the company's products received top marks from experts at the independent tasting competition "Best Product 2025" – five gold medals.
